

Creatively Calm

GLASS-WALL

Aria

Bringing people together, with energy, everywhere, to generate great ideas.

Dry erase glass walls and panels are a hub for creativity and spontaneity, bringing people together, with energy, everywhere, to generate great ideas.

But the beauty of glass in the modern interior can sometimes also become a source of unwanted glare and distracting reflection, which affects the quality of a healthy, focused workspace.

Aria is the optimum solution to drive all the inspiration without the distractions. Its silk surface finish diffuses light to eliminate glare and remove reflections, creating a calmer working space.

The difference is dramatic and with endless colour choice, Aria puts no limits on your interior designs, yet the effect is lasting and will benefit the well-being of all those in this low glare environment.

Focus on your work, not your reflection

Working in harmony with its surroundings, Aria Glass-Wall provides the ideal solution for spaces in which an abundance of natural light is present, either via external glazing, internal glass panels or a combination of both.

Natural light is an important feature for modern commercial settings, but its presence can create distractions on traditional surface glass wall products. Aria’s anti-reflective quality means the user’s focus can remain on what is scribed on the product’s surface, rather than being drawn away by the reflections of passing vehicles or internal movement throughout an office setting.

Aria’s anti-reflective quality ensures that whether presenting a pitch to potential clients, delivering training or undertaking ground-breaking innovation, the attention of those using and viewing the Glass-Wall surface can be fixed solely on it, leading to a more productive environment and better results all round.

External reflections are an unwelcome distraction in the workplace.

No Glare, No Stress

Creating Workplace Wellness

As well as unwanted reflections, traditional surface glass walling products can create glare issues.

Glare is a common lighting problem which can contribute to a host of negative repercussions for the user from discomfort and annoyance, through to health concerns like eye strain and associated headaches and fatigue.

The silk surface of Aria-Glass wall prevents these issues caused by reflected glare, creating a more comfortable collaborative working environment and preventing any accompanying frustration or health related issues.

In an era where workplace wellbeing is pertinent, Aria Glass-Wall is the ideal solution for safe collaborative working.

Effective Glass Wall solution

Aria Glass-Wall provides an effective solution in maintaining a strong aesthetic in collaborative workspaces. With its matte look finish, it creates a strong statement for any contemporary office setting.

Unlike other dry erase systems, Aria's smooth surface ensures an effective cleaning regime, returning the surface to its clear installed state even after continuous use.

A Better Choice for the Environment

The lower embodied carbon choice

In keeping with Specialist Group's sustainability action plan, Aria Glass-Wall represents the most carbon efficient silk glass walling product on the market.

With production in Europe, the system is subject to less air, road and sea miles than any competing product available in the UK or Ireland, contributing to huge carbon savings during the logistics process.

The system itself remains fully recyclable unlike many other glass wall systems on the market. With the use of tempered glass rather than a lamination process, the product can be recycled in its entirety.

This, coupled with the decreased carbon emissions on delivery, contributes to a lower embodied carbon alternative, without any compromise on the aesthetics, efficiency or practicality of the system itself.

Shorter Lead Times

With a European supply base comes shorter lead times, so in choosing Aria Glass-Wall you can improve your project timelines and endure less frustrating waiting times.

Our product is subject to significantly less delivery mileage than others on the market, making it a safe choice where shorter project lead times are at play.

Full design, supply and fit service

Specialist Group prides itself on excellence throughout every department and with a full Design, Supply & Fit package, you can be assured of our utmost attention to detail at every project stage.

Our Design Team will guide you on the correct specification to meet your individual project requirements.

With our Specialist Q-Team dedicated to achieving zero snags on every project, you can be assured that your finished project is fitted to your exacting standards.

The Complete Package

True Colour

Aria Glass-Wall is produced using only low iron Opti-White glass. Its high light transmission prevents the 'green' hue of other glass products, creating a perfectly clear matte finish. When using back painted options, this leads to a finish which is true to colour and helps avoid any accidental clash of colour schemes, allowing the product to fit harmoniously into a project design.

Flexible Design Options

With back painted options available to any RAL colour, the design possibilities presented with Aria Glass-Wall are vast, allowing the system to work in harmony with any design brief and colour scheme.

Further enhance your finished piece with the inclusion of contrasting trims top and bottom and the addition of bespoke pen storage shelving units, for a solution where aesthetics meet practicality.

Low Iron for true back painted colours.

Technical Specification
